DYNAMITE clears the way for modern engineering wonders!

The new

METROPOLITAN LIFE BUILDING

●
**How DYNAMITE breaks
the way for famous
Insurance Company's
new structure**

ANOTHER skyscraper joins New York's myriad towers. It is a new office building for the Metropolitan Life Insurance Company.

Once more architects have designed a modern structure of beauty and symmetry. Once more engineers and builders have turned architects' plans into actuality. And once more Dynamite was *first* on the job to blast out some 70,000 yards of rock so that the foundation might be placed.

Dynamite is the ally of the modern engineer. It is the tool without which carefully designed plans for many heroic undertakings would never be more than paper plans.

Skyscrapers. Tunnels under mountains, rivers and cities. Bridges and highways. Dams and reservoirs. These and numerous other engineering marvels are built with the aid of Dynamite. Dynamite digs into the earth and blasts out raw materials used in the making of countless articles we use every day.

If you would like to learn more about explosives and how to use them—if you are searching for the answer to some specific explosives problem—simply write direct to the du Pont Company for full information.

The vast knowledge of explosives gained by the du Pont Company in 129 years of making and testing explosives is at your service.

EXPLOSIVES

IN DESIGN OR REDESIGN

**LINDE PROCESS SERVICE ASSURES
YOU EVERY ADVANTAGE OF
OXWELDING AND CUTTING**

IN planning a new metal product or improving an old one, Linde Process Service places at the disposal of Linde users an unparalleled knowledge of the oxy-acetylene process of welding and cutting. This service effectively supplements the work of your own engineers in obtaining maximum design advantages, production economies, and complete dependability. Typical examples of Linde Process Service include—

Assistance to a manufacturer in remaking a broken cast iron generator yoke on an urgently fast schedule. This unit was redesigned for fabrication from oxy-acetylene shape-cut steel by welding.

Cooperation with another manufacturer in designing for welded production a steel forming press. Dependability was achieved at exceptionally low cost through the use of oxy-acetylene shape-cut steel.

Helping an aircraft builder design a "hot spot" for fuel heating. The necessary compactness of this device could be obtained only by oxwelding. Lightness without sacrifice of strength was essential.

Tomorrow's engineers will be expected to know how to apply the oxy-acetylene process of welding and cutting metals. For their assistance, we have prepared several interesting technical booklets explaining how this modern metal-working process is used in the design, construction, and fabrication of metal parts and structures. These books contain newer and more practical material than most texts and will form a helpful addition to your personal library. Write to us and we will send them to you without charge.

THE LINDE AIR PRODUCTS COMPANY

Unit of Union Carbide and Carbon Corporation

126 Producing Plants

627 Warehouse Stocks

IN CANADA, DOMINION OXYGEN COMPANY, LTD., TORONTO

District Offices

Atlanta	Detroit	New York
Baltimore	El Paso	Philadelphia
Birmingham	Houston	Pittsburgh
Boston	Indianapolis	St. Louis
Buffalo	Kansas City	Salt Lake City
Chicago	Los Angeles	San Francisco
Cleveland	Milwaukee	Seattle
Denver	Minneapolis	Tulsa
